

Qolcom Control

Mobile Data Optimisation, Security and Metrics for total visibility of your mobile data

OVERVIEW

Today, mobile devices use much more data than they need to, consuming apps and video over 4G, and accessing content not optimised for mobile. Companies are paying for these rising costs of mobility and frequent travel is driving expenses higher still. Mobile threats are continuing to evolve and your devices face an increasing risk of being compromised.

Qolcom gives control back to the enterprise in addressing the mobile data problem by providing a cloud service using proprietary data compression and a policy engine to help businesses manage mobile data, delivering large savings, avoiding bill shock, providing real-time visibility and policy control. Whereas MDM and MAM offerings manage the device or applications, Mobile Data Gateway (MDG) manages the data itself and represents the missing link in business mobility management.

Our proactive multi-level security goes beyond traditional EMM to detect zero-day threats and enable automatic policy based remediation. We also identify risk exposures from data leaks and anomalous user activity.

Your dashboard combines threat and device alerts, aggregate views, and global network insights.

Learn from actionable real-time insights into mobile usage. By understanding how your employees use mobile data, and across which applications and websites, you can get the best out of your enterprise mobile investment.

Prevent Mobile Attacks:

Proactively detect and remediate mobile threats to protect your data.

Optimise Your Usage:

Reduce costs and enhance productivity through data compression and policy.

Get Mobility Metrics:

Learn from actionable real-time insights into mobile usage.

Qolcom Control delivers:

- Understand what apps employees use
- Identify data leaks and anomalous user activity enabling automatic policy based remediation
- Roaming data breakdown across various countries, by employee and across apps.
- Advanced compression algorithms for text, image, and video to deliver instant ROI by reducing data consumption that's high cost
- Reporting and Management Dashboard tracks real-time data usage and savings at the company, group or individual user level.
- Granular controls for daily or monthly data caps on usage and blocking of high bandwidth non-business sites/apps
